SUMMARY

Product Designer focused on AI-assisted products, workflow design, and accessibility. I enjoy identifying product problems, building prototypes, and exploring AI-first workflows that improve user and developer experiences through systems thinking and rapid iteration.

EDUCATION

College of Engineering Thalassery

Bachelor of Technology (B.Tech) in Information Technology

Kannur, Kerala

Jan 2021 – Mar 2025

EXPERIENCE

Open Healthcare Network (Pupilfirst)

Aug 2025 – Jun 2026

UX Design Intern

Remote

- Analyzed clinical workflows by testing existing product flows, identifying usability issues, documenting UX gaps, and proposing workflow improvements for patient history, service requests, appointment scheduling, and encounter workflows.
- Designed a mobile companion concept for CARE AI Scribe after analyzing clinician documentation workflows, exploring how AI-powered documentation could better support clinicians while preserving the existing desktop workflow.
- Designed and prototyped an AI-powered pull request reviewer that combines automated accessibility checks with project-specific guidance to surface accessibility issues earlier in developer workflows.
- Collaborated with the design team, product manager, and developers to validate workflow ideas, discuss implementation trade-offs, and document product improvements through Jira tickets.

ACHIEVEMENTS

First Prize – UI Alchemist Hackathon (RSET Ernakulam)

Runner-up – Designathon 2025 by Lollypop Studio

PERSONAL CASE STUDIES

AI Documentation Beyond the Desktop

- Conducted workflow analysis to identify limitations in AI-powered clinical documentation and reframed the problem around clinician mobility.
- Designed and prototyped a mobile companion concept for CARE AI Scribe, enabling seamless voice capture during patient consultations.
- Evaluated multiple product directions through systems thinking, balancing workflow, operational, and implementation trade-offs.

AI Accessibility Reviewer for Developers

- Identified recurring accessibility and design system issues across an open-source healthcare platform and reframed them as a developer workflow challenge.
- Designed and built a prototype AI-powered pull request reviewer that combines automated accessibility checks with project-specific guidance to help developers identify recurring accessibility issues earlier.

SKILLS

- Skills:** Product Discovery, Workflow Design, Systems Thinking, Interaction Design, Rapid Prototyping, UX Research, Accessibility (WCAG), Design Systems, User Flow Design, Wireframing, Information Architecture, Design Thinking, Usability Testing, Concept Design
- Tools:** Figma, Claude Code, OpenAI Codex, Paper, Adobe Creative Suite, NotebookLM
