

Tushar Endra Koka

Raleigh, NC | 980-899-4305 | tusharendra.k@gmail.com | www.linkedin.com/in/tusharendrakoka

OBJECTIVE

Experienced software engineer seeking a challenging role where I can leverage my expertise in front-end and back-end technologies to design and implement innovative web applications that drive business growth and success efficiently.

EDUCATION

University of North Carolina at Charlotte
MS in Computer Science

Charlotte, NC (USA)
May 2024

• Algorithms & Data Structures, Database Systems, Software Systems Design and Implementation.

PES Institute of Technology
BS in Information Science & Engineering

Bangalore, KA (India)
May 2018

• Statistics for Computer Science, Operating Systems, Web Technologies, Computer Networks.

SKILLS & INTERESTS

Languages: Javascript (ES 6), Typescript, Java, Python, shell script.

Web Technologies & Frameworks: React JS, Angular, Node.js, GraphQL, TypeScript, HTML5, CSS3, JSON, Material UI, RESTful Web APIs, Springboot, CI/CD, Pandas, LLM, RAG, GenAI, Tensorflow, Elasticsearch, WebRTC, PyTorch.

Databases & Tools: PostgreSQL, Firebase, NoSQL, MongoDB, Git, Visual Studio, Jira, Docker, Jenkins, AWSS3, Kubernetes.

WORK EXPERIENCE

Lexisnexis

Raleigh, NC

Software Engineer

Jun 2023 - Present

- Developed an IntelliJ plugin in Java integrating company-specific phrases with CoPilot via RAG and GEN AI for enhanced LLM output, leveraging fine-tuning techniques to optimize developer productivity by 20%.
- Developed the front-end of a data lake system using Angular, while also implementing functionalities on the Java Spring Boot backend, enhancing data accessibility and UX, resulting in a 30% increase in system adoption.
- Developed and implemented a scalable web scraping solution using Python and BeautifulSoup 4, resulting in a 75% reduction in manual data collection efforts for legal and government documents.
- Collaborated and leveraged AWS EC2, S3 to optimize infrastructure and automate data retrieval processes for Lexis+AI, resulting in a 60% decrease in data retrieval time and improved operational efficiency.

University of North Carolina at Charlotte

Charlotte, NC

Web Application Research & Developer

Jan 2023 - May 2023

- Constructing a full stack web app to modernize and optimize business workflows for an automotive company.
- Using efficient methods like chunked uploads to process big data and solve complex problems using python libraries like NumPy, Scikit-learn, Pandas, Matplotlib and React, Node.js, Python, Flask, AWS and MongoDB.

Publicis Sapient

Bangalore, KA (India)

Software Engineer 2

Jan 2021 - June 2022

- Designed and developed a dashboard for the admin on the new IBM's store engagement application 2.0 using carbon design system and increased usage of the dashboard by 40% within the first month of deployment.
- Modernized performance optimization mainly focusing on page load speed, accessibility which improved page load speed by 47%, resulting in a 25% reduction in bounce rate and SEO ranking by 45%, resulting in a 30% increase in organic traffic to the application.
- Automated and executed all workflows in the application using protractor framework with docker containers for different environments reducing manual errors by 70% resulting in improved application reliability, deployment time by 30% by leveraging Docker containers for different environments.
- Lead a team of 3 front-end developers for building progressive web applications as per client's requirements and delivered on strict time constraints resulting in increased customer satisfaction and repeat business.
- Migrated a multi-page user experience into a single page app which significantly improved customer engagement by 50% resulting in increased usage with interactive code and reduced customer queries by 30%.
- Achieved a 95% resolution rate for production issues and change requests within SLA timelines as part of the L3 team, resulting in increased customer satisfaction and reduced downtime for the E-commerce platform.

Publicis Sapient

Bangalore, KA (India)

Software Engineer Intern & FT

Jan 2018 - Dec 2020

- Optimized end-to-end order processes from creation till payments processing, resulting in a 10% increase in order throughput and a 5% boost in revenue within the first quarter of implementation.
- Streamlined order fulfillment flows with design and implementation, reducing processing time by 30% and resolving 95% of change requests and production issues within 48 hours, minimizing downtime.
- User-centric design improvements led to a 25% increase in user satisfaction and a 20% decrease in bounce rates on web pages as per business and design requirements.
- Eliminated inconsistencies in data through IBM Cognos using SQL, reducing inconsistency and reporting errors by 80% and saving an estimated 100 hours of manual data correction per month.
- developed a Stack Overflow clone using JavaScript, Webpack, HTML5, CSS3, and Bootstrap for internal FAQs.

PROJECTS

Road Guardian (HackNC 2023 General - 2nd Place and Cisco - Best Innovative Hack WINNER)

[Devpost](#) [Github](#)

- Engineered an integrated platform with web and mobile apps, leveraging Firebase for real-time data sync, achieving 50% faster issue resolution, and implementing automated cluster deletion for a 60% reduction in redundant data.
- Utilized TensorFlow models for accurate image-based spam filtering, cutting false reports by 60%, fostering data integrity.
