

Koka Easwarendra

easwarendra.ece@gmail.com | +91 7892321484 | Bengaluru, India | [LinkedIn](#)

Principal Full-Stack / AI SaaS Engineer with 11+ years of experience turning early-stage product codebases into reliable, scalable SaaS platforms. Strong recent focus on AI workflows, low-latency retrieval, Stripe entitlements, RBAC, real-time systems, and production platform architecture.

EXPERIENCE

LSAT Demon | Washington, DC

Nov 2025 – Jun 2026

Consultant Software Developer

- Reworked subscription-aware class registration for a production edtech platform serving 50K users, aligning future-class eligibility with Stripe-backed plan state and preventing stale registrations after downgrades.
- Fixed edge cases in recurring class registration by clearing invalid series-level preferences after subscription changes, reducing the risk of unauthorized future registrations and manual support cleanup.
- Designed and implemented a workspace-centric SaaS foundation with RBAC, invitations, Stripe billing, entitlement enforcement, and feature-gated workflows, creating a reusable platform layer for B2B AI product development.
- Architected AI workflow infrastructure for persistent memory, retrieval, and tool-state orchestration, enabling multi-step AI workflows to resume with consistent context across sessions.

MSBAI | Los Angeles, CA

Aug 2023 – Nov 2025

Principal Software Development Engineer

- Partnered directly with the founder in a 3-person engineering team to define, architect, and ship AI/SaaS products across simulation planning, mining-permit generation, and supercomputer resource management.
- Built a reusable SaaS platform foundation that reduced new product setup from 6 weeks to a few hours by standardizing auth, dashboards, backend services, deployment patterns, shared UI components, and product scaffolding.
- Shipped 3 AI products on top of the platform: a human-in-the-loop AI chat app for CFD simulation planning, an AI mining-permit writing application, and an internal SaaS platform for managing HPC/supercomputer resources.
- Built a unified AI retrieval layer across vector, graph, and relational stores, reducing p99 retrieval latency to 250 ms for interactive LLM workflows.
- Engineered real-time AI interaction features including streaming text-to-speech with sub-250 ms response latency and Go + LiveKit desktop sharing at 15 FPS for remote viewing/control.
- Designed a resumable HPC job pipeline with retry, recovery, and continuation support, improving reliability for long-running compute-heavy workflows.
- Owned architecture and implementation across frontend, backend, data access, real-time systems, testing, and production delivery in a lean startup environment.

Loop Health | Bengaluru, KA

Jul 2022 – Feb 2023

Senior Software Developer

- Built HR and insurance-operations dashboards used by 1K B2B users to manage 700K policies and claims, replacing spreadsheet/manual workflows with centralized status tracking.
- Led migration from a Retool-based CRM to a custom Firebase-backed platform with RBAC, scheduled jobs, and workflow-specific dashboards, improving maintainability and reducing dependence on brittle internal tooling.
- Standardized frontend delivery around Next.js, Firebase Functions, GitHub CI/CD, Cypress, logging, and monitoring, improving release reliability and making the platform easier for multiple engineers to maintain.

Nference | Bengaluru, KA

Jan 2020 – Jul 2022

Software Developer

- Built core product workflows for AI Studio, an MLOps platform used by biomedical AI teams for model experimentation, optimization, annotation, and workflow management.
- Developed real-time data-processing workflows for a Real-World Evidence platform, helping transform structured and unstructured healthcare data into biomedical insights for analytics teams.
- Created reusable frontend and data-processing libraries for UI components, annotation workflows, and real-time processing across AI and healthcare analytics products.

Kiwi India Pvt Ltd (Now Joyride Games) | Bengaluru, KA

Jan 2019 – Jan 2020

Software Developer

- Built real-time streaming and marketplace workflows across web and mobile, supporting browse, stream, chat, onboarding, subscription, and payment experiences for interactive gaming users.
- Modernized legacy game-show workflows into a React/TypeScript JAMstack architecture and developed interactive playable ads, including Facebook playable ads, for user acquisition campaigns.

GlowRoad (acquired by Amazon) | Bengaluru, KA

Aug 2017 – Jan 2019

Software Developer

- Built core React e-commerce workflows for a social-reselling marketplace, supporting seller storefronts, carts, incentive systems, logistics integrations, and customer notifications.
- Implemented AMP pages and a React-based design system for myshopprime.com to improve mobile performance, SEO visibility, and frontend consistency.

iTriangle Infotech Pvt Ltd | Bengaluru, KA

Jul 2016 – Apr 2017

Software Developer

- Built real-time fleet telematics dashboards for GPS monitoring, command execution, maps, charts, reports, and document exports across vehicle and yard-management workflows.

LG Soft India | Bengaluru, KA

Aug 2014 – Jul 2016

Associate Software Developer

- Debugged LTE eNodeB and NAS protocol-stack issues by analyzing network logs, reproducing defects, and resolving telecom software issues

EDUCATION & CREDENTIALS

National Institute of Technology, Arunachal Pradesh

2014

Bachelor of Technology, Electronics and Communication Engineering, GPA: 8.01/10

SKILLS & INVOLVEMENT

Backend: TypeScript, JavaScript, Go (Golang), Node.js, Python, SQL, GraphQL

Frontend: React, Next.js, Angular, Svelte, Tailwind CSS, JAMstack, AMP

Cloud & DevOps: AWS, Supabase, Firebase, CI/CD, GitHub Actions, Docker, Serverless Architectures

Databases: PostgreSQL, MongoDB, Redis, Firebase, Vector Databases, Graph Databases

Architecture: Microservices, Event-Driven Systems, AI Workflow Infrastructure, Low-Latency Systems, Distributed Job Processing

Tools: GraphQL, RabbitMQ, Redis, Elasticsearch, GitHub, GitHub Actions, Stripe, Supabase/Firebase, Retool
